RE: WATER CHECK VALVE (BRASS)

DISTRIBUTION:

B & B

All OEM
All after Market

O.E.M.

Production
Service
Dealer
Owner (Consumer)

Through extensive investigation into the reason(s) for the “O” ring blowing off of the check valve, it has been determined that all necessary precautions must be communicated immediately to production, service persons, dealers and owners as to the correct method of **testing** and **winterizing** the water system. Failure to follow these procedures will eliminate all considerations of warranty.

Remember: Once the **test or winterizing** procedure has been completed successfully **do not** depress the check valve to relieve pressure.

This applies to only B & B Molders product utilizing the brass check valve system.
