

PowerVent

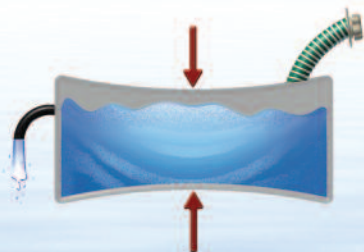

PowerFill
Your Fresh Water
Tank...Safely

Eliminate overfilling and siphoning fresh water tanks

PowerVent was specifically designed with enough venting capacity to allow campers to fill their water tanks "worry free"!

SIPHONING:

When filled past capacity, the potable water tank will continuously discharge from the vent tube long after the supply is turned off if the vent size is too small. Water siphoning will continue even while the vehicle is in motion, until the tank is completely emptied.

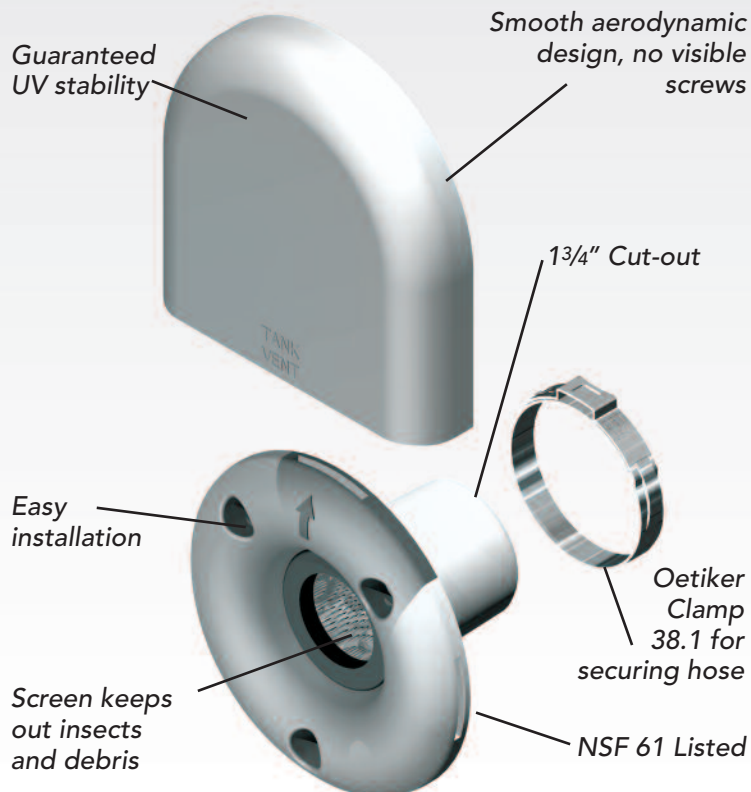

OVERFILLING:

When the water supply filling the potable water tank exceeds venting capacity, the tank can potentially expand dramatically, causing floor damage or catastrophic tank failure.

Freshwater Tank Vent

PATENT PENDING

SPECIFICATIONS:

Color	Part #
Polar White	301-031-00001
Black	301-031-00002
Gray	301-031-00003

ISO 9001 CERTIFIED
